

# Sigfox overview

IOT MEETUP GRENOBLE

In a nutshell

# About Sigfox

Sigfox is **not selling chips**

Sigfox is **not building connected solutions**

Sigfox operates a **global network** for IoT communications

# Plenty of already existing solutions SIGFOX

# Suited for the IoT ?

FIRE STARTING

# Why Sigfox ?

Need for a solution dedicated to the IoT, not an existing one tweaked for it.

We only serve the IoT, that's why we're doing it efficiently

# Business model

# Sigfox business model

Selling access to the service

Price from <\$1/year to ~\$10/year (volume / traffic)

No revenue from the chipsets (royalty-free)

More details

# Energy efficiency

The Sigfox protocol has been designed to maximise energy efficiency

Low consumption while transmitting

Extremely low consumption between emissions

No maintenance

## **OUT OF THE BOX**

NO PAIRING

NO CONFIGURATION

NO SIGNALING

# Very Long Range

Best case scenario

**+100km** between transmitter & receiver (base station)

Real life

A few kms (city) to tens of kms (countryside), **depending on the topography + environnement**

# SIGFOX

In reply to Ludovic LE MOAN

 **HidnSeek (smart GPS)** @xtorrest · Aug 22  
@kernelKing @AaronOlphert1 @thinextra @sigfox @Kordia\_NZ What about 981k with HidnSeek btw device (T) & @sigfox (R).

4 20

# Outdoor & Indoor

## **Good indoor propagation properties**

Of course, you need to consider signal attenuation ( $\sim 20\text{dB}$ )

# Two-way communication

Devices can receive updates sent from your application server  
Each communication is instigated by the device

# Small messages

Useful payload: up to **12 bytes**

Up to **140 times each day**

100 bits/s

# Regulations

# Regulations

Sigfox is operating on unlicensed Sub-GHz frequency bands all over the world

We just have to pick the right central frequency

Easy, right ?

# Low cost of communication

Small subscription fees

Short SW development cycle

Low cost HW components

# Security

# Radio

Each message is **signed with a key unique** to the device

Messages can be **encrypted or scrambled**

No keys exchanged over the network, no handshake

# Message signature

With each message, a hash is calculated & sent; using:

- Device ID

- Secret key, unique to the device. Never transmitted OTA

- Payload

- Internal increment

# Radio properties

Great tolerance to interferors

Jamming resistant

# Cloud

Servers operated by Sigfox

Data-center #1 #2 are located in France

# Ultra Narrow Band

# Sigfox use

The network currently monitors a 200KHz part of the spectrum  
Each message is ~100Hz wide

# UNB Analogy

# Coverage

# Global network

Sigfox is offering a global network, not a solution to build private networks

Roaming is included is the standard service

Devices will work the same all over the network

# Current coverage

24 countries

1.4 million km<sup>2</sup>

358 million people

# Current coverage

## Nationwide coverage

France

Czech Republic

Ireland

Luxembourg

Netherlands

Portugal

Spain

# Countries under rollout

 Belgium

 Brazil

 Australia

 Denmark

 Colombia

 New Zealand

 Finland

 Mexico

 Oman

 Germany

 United States

 Singapore

 Italy

 Taiwan

 United Kingdom

# SIGFOX

# Démo ?

I FEEL LUCK TODAY

# Products

EXAMPLES OF SOLUTIONS ALREADY IN PRODUCTION

# Perfect Sigfox use cases

Independent solutions

no user, no power socket, no local network

Shy devices

Doesn't speak much, but only useful data

# Sigfox foundation

FREE CONNECTIVITY FOR NON PROFIT PROJECTS

# Antarctica

Tracking scientists & assets

Long reach

Ease of use

Robust trackers

# Wildlife

Rhinos tracking & monitoring

Anti poaching operation

Implant & play

Long reach

# Industry

# Predictive maintenance

Optimize & anticipate maintenance  
Alerts when customer needs support  
Lower operation costs  
Increased safety and/or customer satisfaction

# Connected boilers

Remote monitoring of boilers  
Improve maintenance cycles

# Remote sites monitoring

Intrusion detection

Fault detection

Works in remote areas

Plug & play

Low cost

# Health & Assisted living

# Assisted Living Box

Elderly people benefiting from home services

Monitor carers come & go

NFC badge reader

ROI : 6 months

Increased service quality

# Defibrillators

Guarantee that the equipment is in working order

Reduced costs (easy installation)

Notifications

Central supervision

Public sector

# Smart parking

Parking spots monitoring

Real time guidance for users

Traffic optimization

Local enforcement optimization

# Waste management

Optimize costs of collection

Plug & play

Years of battery life

# Connected dumpster

Improve collecting of recycled  
textiles

Filling level monitoring

Route optimisation

New usage data

# Fire hydrants

Detect faulty hydrants

Fraud detection

Increased security

Long battery life

Easy integration

# Air quality

Closer monitoring of air quality

Local precision

Better monitoring

Data produced for pollution  
prediction

# Street lighting

Save Energy & Costs

Improved maintenance

Light intensity management

# Water level monitoring

Numerous applications

Ease of use

Low cost

# Utilities

# Metering

Different solutions

Smart or add-on to existing meters

Low cost of installation & operation

# Solar panels monitoring

Remotely monitor solar panel output

Fault detection

Easy to install

Simple, robust

Home & lifestyle

# Sound detector

« Shazam » of home security

Out of the box connectivity

Low TCO

Easy pan-european deployment

# Home Alarm System

Backup connectivity for GSM solution

Jamming resistant

Continuity of service

Self deployment

High capacity network

# Smoke detector

Get alerted even when out

Easy install

Fault detection

# Water quality monitoring

Swimming pool water quality monitor

Long reach (> WiFi)

No install

# GPS Trackers

Low cost, high precision trackers

No setup

No companion device required

Long reach

Cross borders

# Agriculture

# Crop management

Smart irrigation

Environnement sensors

Ease of use

Yield optimisation

24/7 data

# Connected Beehives

Automate & optimize honey  
production

Scales

Remote monitoring

Long battery life

# Weather monitoring

Accurate & personal weather data

Affordable

Easy installation

Long battery life

Retail &  
other services

# Button

Simplest interface possible

Press a button ; trigger a service

No installation

Cloud-based service

# Customer Satisfaction

Effortless customer feedback

No wiring

No pairing

Long battery life

# Fleet management

# Stolen car recovery

Locate & recover stolen assets

Small form factor

Long battery life

Combined with UHF

# Chipsets

[HTTP://PARTNERS.SIGFOX.COM](http://partners.sigfox.com)

# Open Ecosystem

**SIGFOX is not a hardware vendor**

Wide ecosystem of partners :

Atmel, NXP, ON, SiLabs, Texas Instruments

Atim, Telecom Design, Telit, Radiocrafts

More **soon** ;)

Sigfox software stack is provided royalty free

# Various solutions

Radio transceivers, to build a custom chipset (high volume)

Reference designs, for low cost & ready to use solution

Modules : all included, pre certified. Solder & play

# Prototyping

Several solutions available for Arduino & Raspberry Pi  
Free subscription included for each development kit  
Easy onboarding with access to the full service in 3 mins  
Check out <http://partners.sigfox.com> for the full details

Cloud

# Get your data

View messages : Sigfox web platform

Get messages : REST API (pull)

Receive new messages : HTTP Callbacks (push)

# 3rd party platforms

Built in connectors with Microsoft Azure & Amazon WebServices

Easy integration with 3rd party platforms (partners or proprietary)

# Callbacks

Each message received from your devices will be forwarded to your application server through HTTPS requests

Customisable headers & body

You can set more than one callback

# Downlink messages

A downlink message can be

- Semi automatic : sent directly by the network

- Customised : sent by your own application server
